FANCI (C2) Antibody, Rabbit Polyclonal

Cat#: R0147-2

Quantity: 100 ul

Predicted M.W.: 149 kDa

Lot#: Refer to vial

Application: WB

Uniprot ID: Q9NVI1

Background:

Fanconi anemia, complementation group I (FANCI) is required for maintenance of chromosomal stability. It plays a role in the repair of DNA double-strand breaks by homologous recombination and in the repair of DNA cross-links. In response to DNA damage it is involved in the S phase and G2 phase checkpoints of the cell cycle. FANCI also promotes FANCD2 ubiquitination and recruitment to DNA repair sites. Fanconi anemia is a genetically heterogeneous recessive disorder characterized by cytogenetic instability, hypersensitivity to DNA crosslinking agents, increased chromosomal breakage and defective DNA repair.

Other Names:

FLJ10719, KIAA1794, Protein FANCI

Source and Purity:

Rabbit polyclonal antibodies were produced by immunizing animals with a GST-fusion protein containing the C-terminal region (distinct from the C-terminal region for R0147-1) of human FANCI. Antibodies were purified by affinity purification using immunogen.

Storage Buffer and Condition:

Supplied in 1 x PBS (pH 7.4), 100 ug/ml BSA, 40% Glycerol, 0.01% NaN₃. Store at -20 °C. Stable for 6 months from date of receipt.

Species Specificity:

Human

Tested Applications:

WB: 1:1,000-1:5,000 (detect endogenous protein*)

*: The apparent protein size on WB may be different from the calculated M.W. due to modifications.

Product Data:

Fig 1. Western blot of total cell extracts from human HeLa, using Ab (A) R0147-1; (B) R0147-2; or (C) R0147-3 at RT for 2 h.
